(54) Title: IMPROVEMENTS IN DESKING SYSTEMS

(57) Abstract

A desking system comprises substantially vertical elongate members in the form of legs (1-4) which are located at or adjacent to the corners of a desk, the legs at each end of the desk being connected by depth adjustment means in the form of plates (5, 6) which enable the depth of the desk to be adjusted. Rails (11-14) extend between the legs of the desk and are connected to the legs by upper connectors (15) and lower connectors (16). The rails may be of any desired length in order to vary the length of the desk. Support brackets (31) for a work surface (70) are engaged with the rail (11) which may be connected either to the front legs (1, 3) or the rear legs (2, 4) of the desk.
