Abstract

5 The use of: (a) an antibody or antibody fragment
which binds to an epitope on a single species of
pathogen or an antigen derived therefrom, or (b) an
immunoreactive composite of a plurality of chemically
linked antibodies or antibody fragments which bind to a
10 plurality of epitopes on a single species of pathogen or
an antigen derived therefrom; said antibody or antibody
fragment or composite being conjugated to at least one
diagnostic or therapeutic agent to form an antibody
conjugate;

15 in the preparation of an agent for use in a
method of diagnosis or therapy of a focus of infection,
wherein a patient infected with a pathogen is injected
parenterally with said antibody conjugate, and the
conjugated diagnostic or therapeutic agent is targeted
to said focus, whereby the diagnostic or therapeutic
20 function thereof is effected.

A sterile, injectable preparation for such use
is also provided.
