(54) Title: A METHOD AND A DEVICE FOR IMPROVED SERVICE AUTHORIZATION

Fig. 2

(57) Abstract: A method (300) for a wireless telecommunication system (200) with user equipment, UE (110), and a first node (120) to which a UE may send a request for access to a service, and a control function (160) with information about the access rights to specific services for UEs in the system. The system (200) comprises an interface (150) between said first node (120) and the control function (160), and the method (300) comprises the step (3) of letting said first node receive information about a UE's access rights from said control function, and letting said first node handle access requests to a service from a UE using the access rights information from said control function. The method additionally comprises the step (3) of letting the access rights information from said control function to said first node comprise a code (X, Y, Z) regarding services to which the UE is denied access.
