

ABSTRACTBAR FOR ATTACHING A WATCH WRISTLET AND
WATCH FITTED WITH SUCH A BAR

The invention concerns a bar (6) for attaching a watch wristlet (4) intended to be engaged by sliding into a passage (12, 14) of a watch case (2) and inserted in one of the ends of a wristlet (4), said bar (6) including an elongated body (22) and being characterised in that it includes a locking device, said locking device including a lock (28) subjected to the action of a resilient element (30) and means (32, 36) for controlling said lock (28) which are accessible from one end of the bar (6), said lock (28) being arranged so as to project in a transverse direction with respect to said body (22) outside said body of said bar (6), in a first position (Figure 1) in which the control means (32, 36) are not actuated, and to retract inside said body (22), in a second position (Figure 2) when the control means (32, 36) are actuated.
