Claims

1. A mixture for the treatment of urea-containing fertilizers, comprising

   a) at least one (thio)phosphoric triamide of the general formula (I) and/or (thio)phosphoric diamide of the general formula (II)

   $R^1R^2N-P(X)(NH_2)_2$ (I)

   $R^1O-P(X)(NH_2)_2$ (II)

   with the following definitions:

   X is oxygen or sulfur,

   R^1 and R^2 independently of one another are hydrogen, in each case substituted or unsubstituted 2-nitrophenyl, C_{1-10} alkyl, C_{3-10} cycloalkyl, C_{3-10} heterocycloalkyl, C_{6-10} aryl, C_{6-10} heteroaryl or diaminocarbonyl, it also being possible for R^1 and R^2, together with the nitrogen atom joining them, to form a 5- or 6-membered saturated or unsaturated heterocyclic radical, which optionally may also contain one or two further heteroatoms selected from the group consisting of nitrogen, oxygen and sulfur, as component A,

   b) 2-(N-3,4-dimethylpyrazole)succinic acid, possibly also in salt form, as component B,

   characterized in that components A and B are in a weight ratio in the range from 1:1.5 to 1:5, more particularly 1:2 to 1:4.5.
