

ABSTRACT

ANALYSIS SYSTEM

5 An analysis system (1) includes: a plurality of data
collection devices (10) mounted on a plurality of
respective mobile objects (V) that travel in a plurality of
routes and collecting analysis data including image data
expressing an image inside the mobile object (V) and
10 position data expressing a position at which the image
inside the mobile object (V) is captured; and a data
analysis device (20) that counts the number of passengers
in the mobile objects (V) for each of the routes on the
basis of the analysis data collected by the data collection
15 devices (10). As a result, the analysis system (1) obtains
an effect that the tendency of the mobility of people can
be analyzed properly.
