(54) Title: IMPROVED BOTTLE

Fig.1

(57) Abstract: An apparatus includes a bottle, a cap, and a tamper evident film. The bottle forms an opening having a lip that extends circumferentially around the opening. The cap is able to cover and seal the opening. The cap has a top with an outer surface, an inner surface, and a side wall. The outer surface and the side wall define a recessed region of the cap. The tamper evident film includes a perforated tear strip. The perforated tear strip is positioned to overlap a portion of the recessed region. The cap may also include a combination of micro knurls and/or micro knurls along the side wall of the cap. The lip may have a beveled profile able to interface with a gasket on the underside of the cap.
