ABSTRACT

Examples of the present application disclose a data processing method and apparatus, and a storage medium. According to the data processing method, stay time length information of a target person for a plurality of vehicle models is obtained, wherein the stay time length information is determined based on at least one visit of the target person. An attention vehicle model of the target person is determined based on the stay time length information. Information of the attention vehicle model of the target person is sent to a terminal. Thus, the terminal displays the information of the attention vehicle model of the target person on a first interface.
