

ABSTRACT

The present disclosure provides a method and apparatus for detecting dealing sequence, a storage medium, and an electronic device. The method includes: obtaining a video stream of a game desktop, and performing game card detection on multiple image frames included in the video stream; in response to detecting a newly added game card in at least one image frame in the video stream, determining whether the newly added game card is in a target state in which allocation ends; after the newly added game card is in the target state in which allocation ends, determining game information corresponding to the newly added game card; and determining, based on the game information, whether a sequence of allocating the newly added game card conforms to a predetermined dealing sequence.
