

ABSTRACT

Disclosed in the present application are a virtual button control method and apparatus, and a storage medium and an electronic device. The method comprises: displaying at least two virtual buttons in a virtual scene, wherein each of the at least two virtual buttons is displayed in an inactive form or a ready-for-activation form; for a virtual button in a form to be activated, when an initial triggering condition corresponding to an interaction operation executed by a virtual character on an interaction object corresponding to the virtual button is satisfied, switching to the virtual button in the ready-for-activation form; and for the virtual button in the ready-for-activation form, when a target triggering condition corresponding to an interaction operation executed by the virtual character on an interaction object corresponding to the virtual button is satisfied, displaying the virtual button switched to an active form, and controlling the virtual character to execute the interaction operation on the interaction object corresponding to the virtual button.
