ABSTRACT

POWER SUPPLY SWITCHING METHOD AND APPARATUS, AND MULTI-POWER SUPPLY SYSTEM

The present disclosure provides a power supply switching method and apparatus, and a multi-power supply system. The method is applied to a multi-power supply system which includes an alternating-current power supply, a direct-current power supply and an energy storage power supply. The method includes: obtaining a power supply switching instruction, wherein the power supply switching instruction includes a power supply switching direction; and controlling, according to the power supply switching direction, the energy storage power supply to perform a voltage transition in the power supply switching process.
