

Title of Invention

COMPUTER SYSTEM, METHOD, AND PROGRAM FOR IMPROVING RELATIONS WITH
INDIVIDUAL PARTIES IN TWO-PARTY COMMUNICATION

Abstract

This computer system for assisting communication between two parties is configured to: receive information indicating a response that a first party of the two parties expects a second party of the two parties to make in the communication; receive speech and/or video during the communication; derive an advice relating to the communication on the basis of the information and the speech and/or the video; and provide the derived advice during the communication.
