VARIABLE DENSITY TOPSHEET FOR DISPOSABLE ABSORBENT

ARTICLE

A disposable body fluids absorbent article includes a topsheet 2 made of nonwoven fabric, the topsheet being formed with a plurality of pleats 5 extending substantially in one direction. Crests 7 and troughs 8 of the pleats 5 have a relatively high density and side walls 9 defined between the crests 7 and the troughs 8 have a relatively low density. The article having such topsheet 2 allow an absorption capacity of an absorbent core of the article to be utilized as efficiently as possible.

Refer to Fig. 2.
