(54) Title: MICROFLUIDIC CONTINUOUS FLOW DEVICE FOR CULTURING BIOLOGICAL MATERIAL

(57) Abstract: The present invention refers to a microfluidic continuous flow devices for culturing biological material each comprising a cultivation chamber being dimensioned to retain a biological material and having an inlet and an outlet to allow flow of a cultivation medium through the cultivation chamber. The present invention also refers to a method using the microfluidic continuous flow device of the present invention and the uses for these devices. In one example a microfluidic continuous flow device of the present invention is connected to a gradient generator.
