

ABSTRACT OF THE DISCLOSURE

METHOD FOR PRODUCING HAIR COSMETIC COMPOSITION

A method for producing a hair cosmetic composition, comprising mixing the components other than the components (A) and (D) among all of the components including the components (A) to (E) to be emulsified, followed by adding the perfume components to the mixture and mixing it at 0 to 60°C, wherein (A)+(D) ≤ 4 mass%, $0.2 < (A)/[(A) + (D)] < 0.8$:

(A) A silicate ester represented by formula (1)

wherein R^1 represents an aliphatic hydrocarbon group of the C_{1-22} in total which may be substituted with a phenyl group, a hydroxy group or an alkoxy group; R^2 represents a residue obtained by removing one hydroxy group from a perfume alcohol of C_{3-40} ; and n represents an integer of 0 to 3;

(B) A quaternary ammonium salt type-cationic surfactant;

(C) An aliphatic alcohol of C_{16-22} ;

(D) A perfume compound;

(E) Water.
