

Figure 1: *In vitro* release rate ($\mu\text{g/d}$) of anastrozole for formulations A, B and C

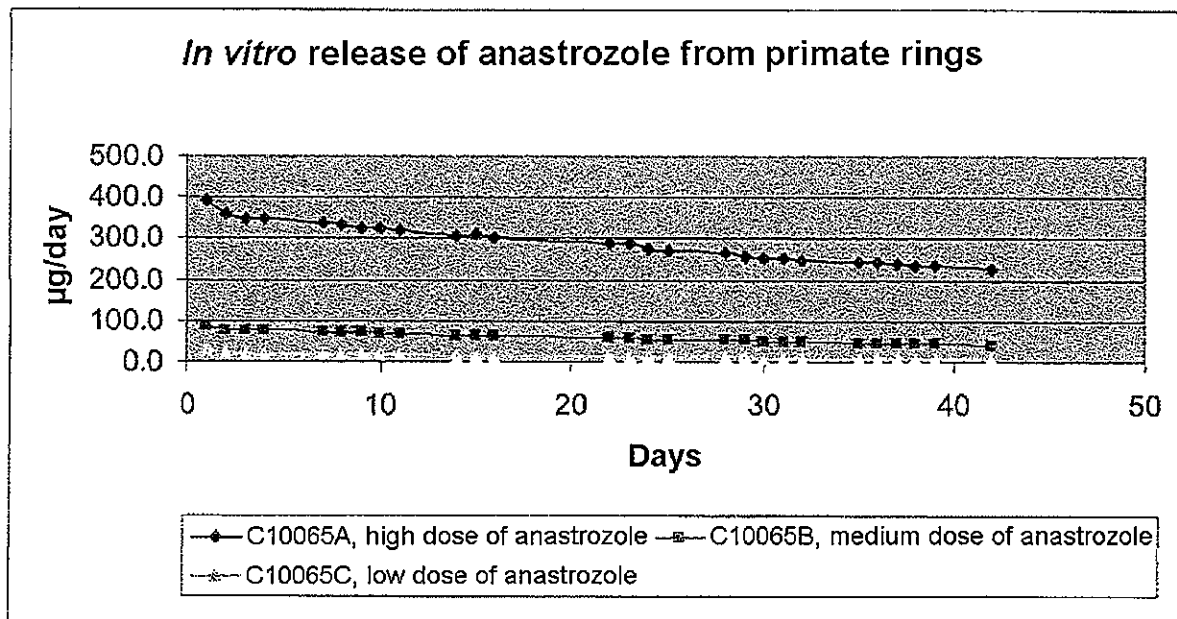

Figure 2: Estradiol levels (pmol/l) during the follicular phase. 390 μg of anastrozole per day

lowers the estradiol levels significantly (P value < 0.0478) as compared to the placebo group.

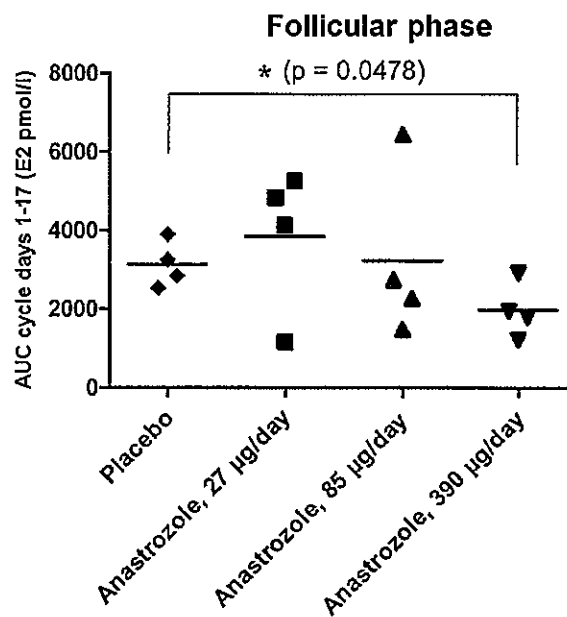

Figure 3: Time courses for plasma concentration of anastrozole after IVR administration in female cynomolgus monkeys
