

## ABSTRACT

Method of manufacturing a degaussing loop, and loop obtained by this method.

The invention relates to the manufacture of degaussing loops intended to be mounted on the glass bulb of cathode-ray tubes for image display in colour.

The subject of the invention is a method of manufacture, in which the link between the ends (1, 2) of the coil (12) of the degaussing loop and the conductors (4,5) for connecting to the electrical power supply circuit is encased by injecting an insulating thermoplastic into a mould.

The invention applies particularly to degaussing loops for colour television receivers.
