

ABSTRACT

A adhesive composition is used for bonding an optical member, the adhesive composition containing a (meth)acrylic polymer (A) and a photoinitiator (B), in which the photoinitiator (B) contains a photoinitiator (b1) which is a compound having, in a
5 molecule, a radically polymerizable functional group having a carbon-carbon double bond, and a radical generating group, and has a molar absorption coefficient of 30 (L/mol·cm) or more at 405 nm.
