ABSTRACT

A method may include receiving a first service request from a first service requester. The method may include obtaining a plurality of first candidate service requesters. The method may include determining whether there is at least one second service requester associated with a second service request that is combinative with the first service request in the plurality of first candidate service requesters. The method may include determining a plurality of third service requesters different from the plurality of first candidate service requesters in response to a determination that there is no the at least one second service requester. The method may include determining at least one target service requester from the plurality of third service requesters. The method may include transmitting a carpooling message to the at least one target service requester to initiate a third service request that is combinative with the first service request.
