

ABSTRACT

A virtual object attack prompt method and apparatus, and a terminal and a storage medium, relating to the technical field of computers and the Internet. The method comprises: displaying a user interface, the user interface comprising a target virtual object located in a virtual environment (301); obtaining an attack direction of the target virtual object, the attack direction referring to a direction in which the target virtual object is attacked (302); determining a display position of attack direction prompt information according to the attack direction, the attack direction prompt information being used for indicating the attack direction (303); and displaying the attack direction prompt information in the user interface according to the display position (304). According to the method, a prompt of the attack direction is realized, and the content of the attack prompt is enriched, so that more valuable information is provided.
