(54) Title: LOCATING AND RELOCATING DEVICE

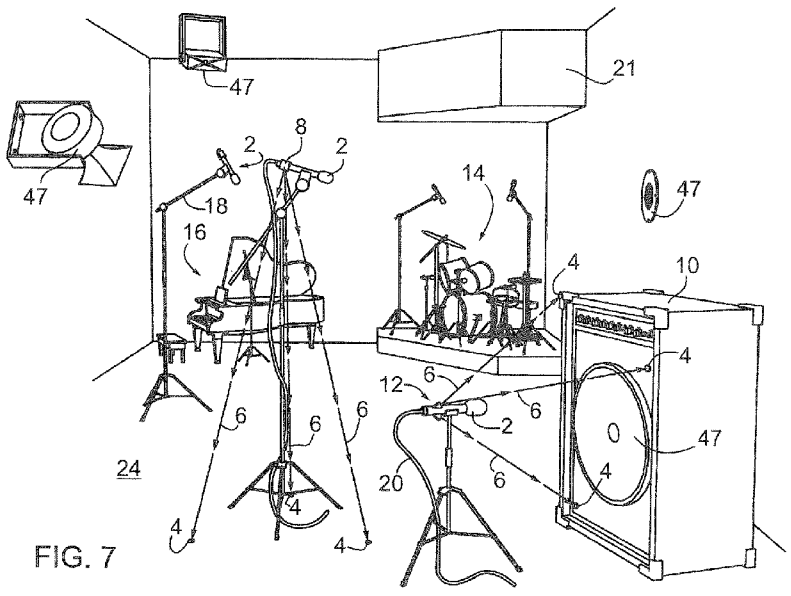

FIG. 7

(57) Abstract: A relocating device for locating and relocating a first object relative to a second object includes at least one light source, and a power source. The at least one light source is for producing at least two beams of light wherein each beam of light is capable of defining a beam location point on the second object. The at least one light source is operably connected to the first object. The power source is operably connected to the at least one light source. The relocating device also includes a means for defining the beam location point. A method of locating and relocating a first object relative to a second object is also disclosed.
