

ABSTRACT

The present invention relates to a detergent containing or prepared by blending: (A) an anionic surfactant; (B) an aminopolyether-modified silicone containing a polyoxyalkylene structure and satisfying the following formula (I); and (C) a cationic polymer, wherein a mass ratio [(A)/(B)] of the component (A) to the component (B) is 25 or more and 5,000 or less, and a mass ratio [(B)/(C)] of the component (B) to the component (C) is 0.001 or more and less than 1:

$$0.01 \leq \text{Si}/\text{AO} \leq 1.6 \quad (\text{I})$$

[in the formula (I), Si represents a molar number of a silicon atom in the component (B), and AO represents an oxyalkylene average addition molar number in the component (B)].
