

ABSTRACT

Provided is a part-time work management system including terminals using distributed data storage. An employer is reliably
5 supplied with employees so as to employ an employee able to provide improved quality of work. The employee is fairly paid, with his/her work time being accurately measured. The system prevents or minimizes a poor attitude in work, a lack of professional ethics. Conflicts repeatedly occurring in the
10 short-term market are prevented. The employer and the employee determine and configure start and end points of work times and break times of the employee to reduce the possibility of conflict. The determined work time is stored in a distributed manner, so that the employer and the employee determine the work time in
15 any place at any time.
