(54) Title: FAN BLADES AND MODIFICATIONS THEREOF

FIG. 1

(57) Abstract: A fan blade adapted for connecting to a mount includes a body having an airfoil shape in cross-section, the body including a hollow portion having a lower surface and a solid portion depending from the body to a location below the lower surface when the fan blade is connected to the mount. A winglet may be attached to one end of the body, and may include a portion having an airfoil shape in cross-section. The winglet may comprise a body including a mount for connecting to the fan blade. The body may further include a generally vertical portion having a greater surface area, below the mount than above the mount. The body may have a portion angled in both a vertical direction and in plan view, such as along a leading edge, trailing edge, or both. The fan blade may be extruded from aluminum.
