

ABSTRACT

Method for extracting and providing in desired composition of granular material, comprising the following steps of:

- 5 - sucking or scooping up granular material;
 - separating the granular material into fractions;
 - mixing the granular material into a mixture of the different fractions; and
 - adding granular material from a fraction insufficiently available at the extraction location.
- 10 2. Installation for extracting and providing granular material, for instance sand and gravel, in desired composition, comprising:
 - means for sucking or scooping up granular material;
15 - means for sorting the material into two or more grain size classes;
 - means for mixing the material from the classes into a mixture of granular material; and
 - means for adding one or more additives to the mixture.
