(54) Title: TUBE HOLDING APPARATUSES FOR FILLING OF MULTIPLE CONTAINERS AND METHODS FOR USING THE
SAME

(57) Abstract: A tube holding apparatus includes a body, a mount a first guide, and a second guide. The body has a proximal end portion and a distal end portion. The mount is positioned between the proximal end portion and the distal end portion of the body. The mount is configured to secure the body to a valve tower. The first guide is secured about the proximal end portion of the body. The second guide is secured about the distal end portion of the body. The first guide and the second guide each configured to receive a portion of a transfer link that extends between a valve tower and a storage container such that a positive slope container to the valve tower.
