(54) Title: METHOD, SYSTEM AND COMPUTER SOFTWARE PRODUCT FOR PRE-SELECTING A FOLDER FOR A MESSAGE

(57) Abstract: In a computer system, a system, method and computer program product for pre-selecting a folder for a current message. The system, method and computer program product involve (a) providing a folder pre-selection cache having n configurable entries, n being a predetermined positive integer greater than one, each configurable entry being configured to include an associated pre-selection criterion for matching with the current message, and an associated folder identification for identifying an associated folder in the plurality of folders; (b) for at least one entry in the folder pre-selection cache, comparing a comparison criterion, obtained from the current message, with the associated pre-selection criterion to determine a matching entry in the folder pre-selection cache; and, (c) pre-selecting the folder identified by the associated folder identification of the matching entry when the message comparison module determines the matching entry in the folder pre-selection cache.
