TEXT DETECTION DEVICES AND TEXT DETECTION METHODS

Abstract

According to various embodiments, a text detection device may be provided. The text detection device may include: an image input circuit configured to receive an image; an edge property determination circuit configured to determine a plurality of edge properties for each of a plurality of scales of the image; and a text location determination circuit configured to determine a text location in the image based on the plurality of edge properties for the plurality of scales of the image.

FIG. 1A
