

ABSTRACT**5 A SYSTEM AND METHOD FOR PROVIDING EDUCATION**

The invention is a system for providing education, comprising a server that stores files relating to one or more education subjects, which includes questions, their corresponding answers, or both, and a first device that a student interacts therewith,
10 which is interfaced with the server. The server provides the student with one or more education sessions via the first device, which includes a first session-type that provides a practice environment divided into time blocks, for determining their performance level, and provides the student marked questions, questions based on their previous performance level, or both, for a current education session.
