

ADHESIVE COMPOSITION

ABSTRACT

An object of the present invention is to provide an adhesive composition excellent in adhesion properties and close contact properties to many types of plastics such as polypropylene, polyethylene, and cycloolefin resins. The adhesive composition of the present invention comprises the following components (A) to (C): (A) a radically polymerizable compound; (B) a polymer having a weight-average molecular weight of 35,000 to 110,000 and having a repeat unit derived from a polymerizable compound of formula (I) (wherein X^1 and X^2 each independently represent a C7 to C20 alkyl group or a C7 to C20 alkoxy group, n represents 0 or 1, Z^1 and Z^2 each independently represent a single bond or a C1 to C3 alkylene group, each R independently represents an organic group or a halogeno group, m_1 and m_2 each independently represent any integer of 0 to 4, and Y represents a polymerizable functional group); and (C) a radical polymerization initiator.
