

TITLE OF INVENTION

Multi-function bike for farming and garden work

ABSTRACT

The said invention is a multi-function bike for farming and garden work. It is a modified ordinary bike combine with two set of the accessory mechanical parts named as "plug and ride" floating slide boards. A pair of the big floating slide board has its own convey system which installed on the rear wheel. When pedal rolls, a part of the force will be transferred to rolling arm plates by chain-set and further drive floating slide board "slide, walk" or "jump" with the "leg-like" bolt stanchions. The floating slide board has different styles design in order to fit seasoning farm work. Another small slide board is installed behind the fore wheel. It can be stored under the tube or regularly pushed to move by a special clamp that clamped in the pedal, it also has supporting function based on using situation. The said invention can be ride in the mud /water rice paddy to do "plant rice seedling" work, useless grass removal, and normal field checking work. It is suitable for farmer family using, also for mountain and natural reserved area.
