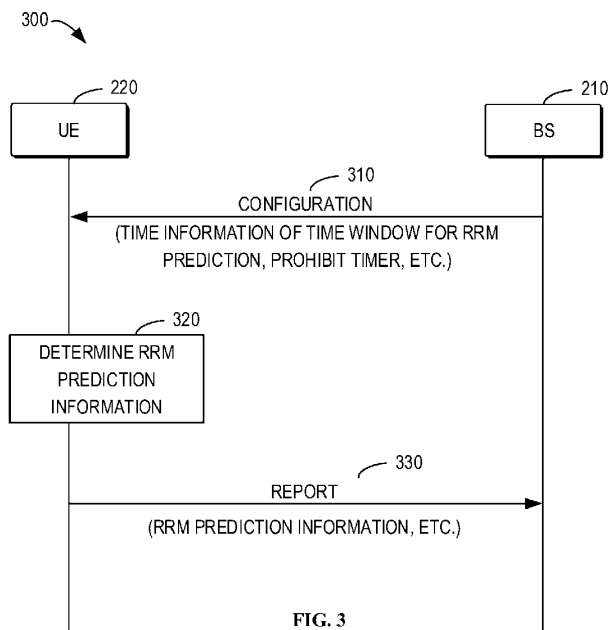

FIG. 3

(57) Abstract: Example embodiments of the present disclosure relate to a UE, a BS, methods, apparatuses, and computer readable medium for a time domain RRM prediction. In the solution, a UE may receive a configuration indicating time information of a time window for RRM prediction. The UE may further determine RRM prediction information based on the configuration and transmit a report which includes the RRM prediction information. As such, a BS may be aware of the RRM prediction information and one or more operations may be performed before too late.
