(54) Title: COMPOSITIONS WITH ENHANCED PHOTOPROTECTIVE EFFECT AND METHOD FOR USING SAME (57) Abstract The present invention relates to a sunscreen composition for topical application to the skin comprising a fluoro-resin having a submicron in combination with a sunscreen agent and an oil component. These compositions provide a boost in the SPF value of the composition. The invention also provides methods relating to the use of these compositions for boosting the SPF and decreasing the irritation on the skin caused by irritating sunscreen agents.
