ACTION

WO 01/27627 A3

(54) Title: ASSAY DEVICE

(57) Abstract: The invention provides an assay device for quantification or detection of the presence or absence of an analyte in a liquid sample, comprising a moulding (1) permanently or removably attached to a substantially planar plate (2) such that a part of said moulding forms a capillary chamber (3) between said plate and the said moulding, the device further comprising a chamber (5) into which a test sample and/or reagent can be introduced and further comprising a chamber (7) capable of accomodating an absorbent pad, wherein the said chamber into which a test sample and said chamber capable of holding an absorbent pad are in lateral flow contact *via* the said capillary chamber (3).
