

ABSTRACT

A compound represented by formula (I) and a use thereof in the preparation of a drug. The invention relates to a novel compound having an IRAK4 degradation effect, which can effectively degrade IRAK4 or otherwise inhibit IRAK4 activity. The invention has very good prospects for application in IRAK4-mediated diseases, including immune diseases, tumors, Alzheimer's disease, and fibrotic diseases, and provides a new choice for clinical screening and/or preparation of drugs related to IRAK4 activity.
