

ABSTRACT

One embodiment of the present invention relates to an underwater antifouling coating composition, an antifouling coating film, a substrate with an antifouling coating film or
5 a method for producing the same, or an antifouling method for a substrate, and the underwater antifouling coating composition contains a hydrolyzable (co)polymer (A) having a constituent unit derived from a hydrolyzable group-containing monomer, a rosin compound (B), and an antifouling agent (C),
10 the rosin compound (B) contains a rosin compound monomer (B1) and a rosin compound multimer (B2), a content of the multimer (B2) with respect to 1 part by mass of the content of the monomer (B1) is 0.07 to 5 parts by mass, and a total content of the (co)polymer (A) and the rosin compound (B) with
15 respect to 100 mass% of a solid content of the underwater antifouling coating composition is 5 to 40 mass%.
