

Abstract

A mattress with pocket coils is disclosed. The mattress includes coil springs forming the pocket coils; a first fabric defining pocket spaces
5 in which the respective coil springs are housed; and a second fabric extending in a planar shape so as to cover an entirety of the pocket spaces. The first fabric is provided for each of rows of the pocket spaces. The first fabric has perforations on both
10 sides with respect to a center of each of the pocket spaces. The perforations are continuous in a first direction. The second fabric is fixed to a portion between the two perforations of the first fabric. The portion is between the two perforations in a
15 second direction intersecting the first direction. The two perforations are configured to be broken in response to the portion of the first fabric being pulled in a direction away from the pocket spaces.
