

Title of Invention: GATE APPARATUS, CONTROL METHOD OF GATE APPARATUS, AND STORAGE MEDIUM

ABSTRACT

5

There is provided a gate apparatus that prevents a user from leaving a baggage placement area without his or her baggage. The gate apparatus includes a detection unit, an alert unit, and a gate control unit. The detection unit detects whether there is an object in a baggage
10 placement area. The alert unit gives, if there is the object in the baggage placement area, an alert about left-behind baggage. The gate control unit controls, if there is the object in the baggage placement area, a gate such that an examination target user cannot pass through the gate.
