

DEVICE FOR GUIDED BONE REGENERATION AND PRODUCTION METHOD**ABSTRACT**

The present invention relates to a device for guided bone regeneration, intended for the reconstruction of a buccal bone defect, composed of zirconium dioxide and having a shape which covers said buccal bone defect. The present invention also relates to a method for producing a device of the invention, comprising a step of constructing the device of the invention according to a three-dimensional representation obtained by means of a technique of maxillo-dental imaging of the bone defect.
