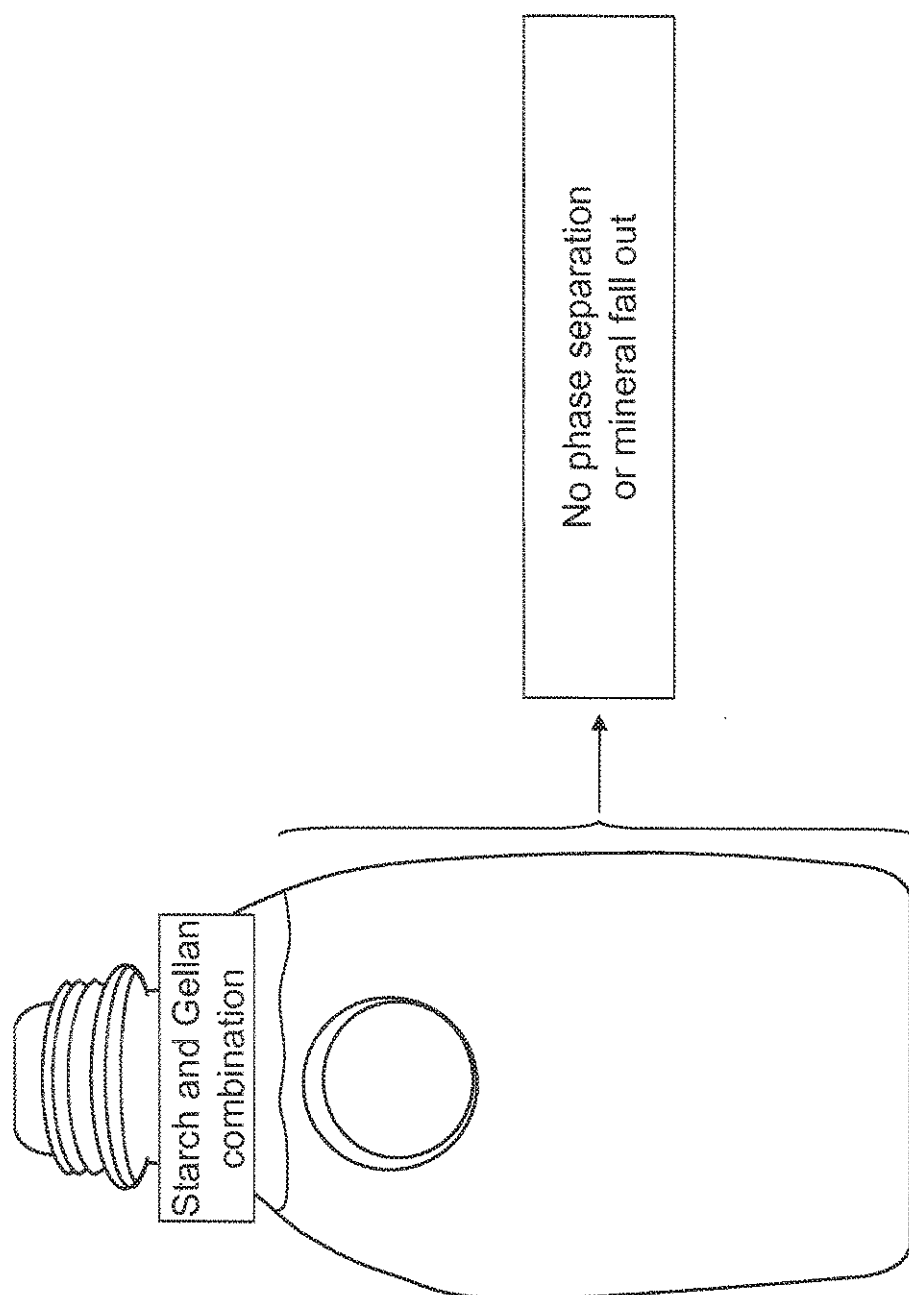

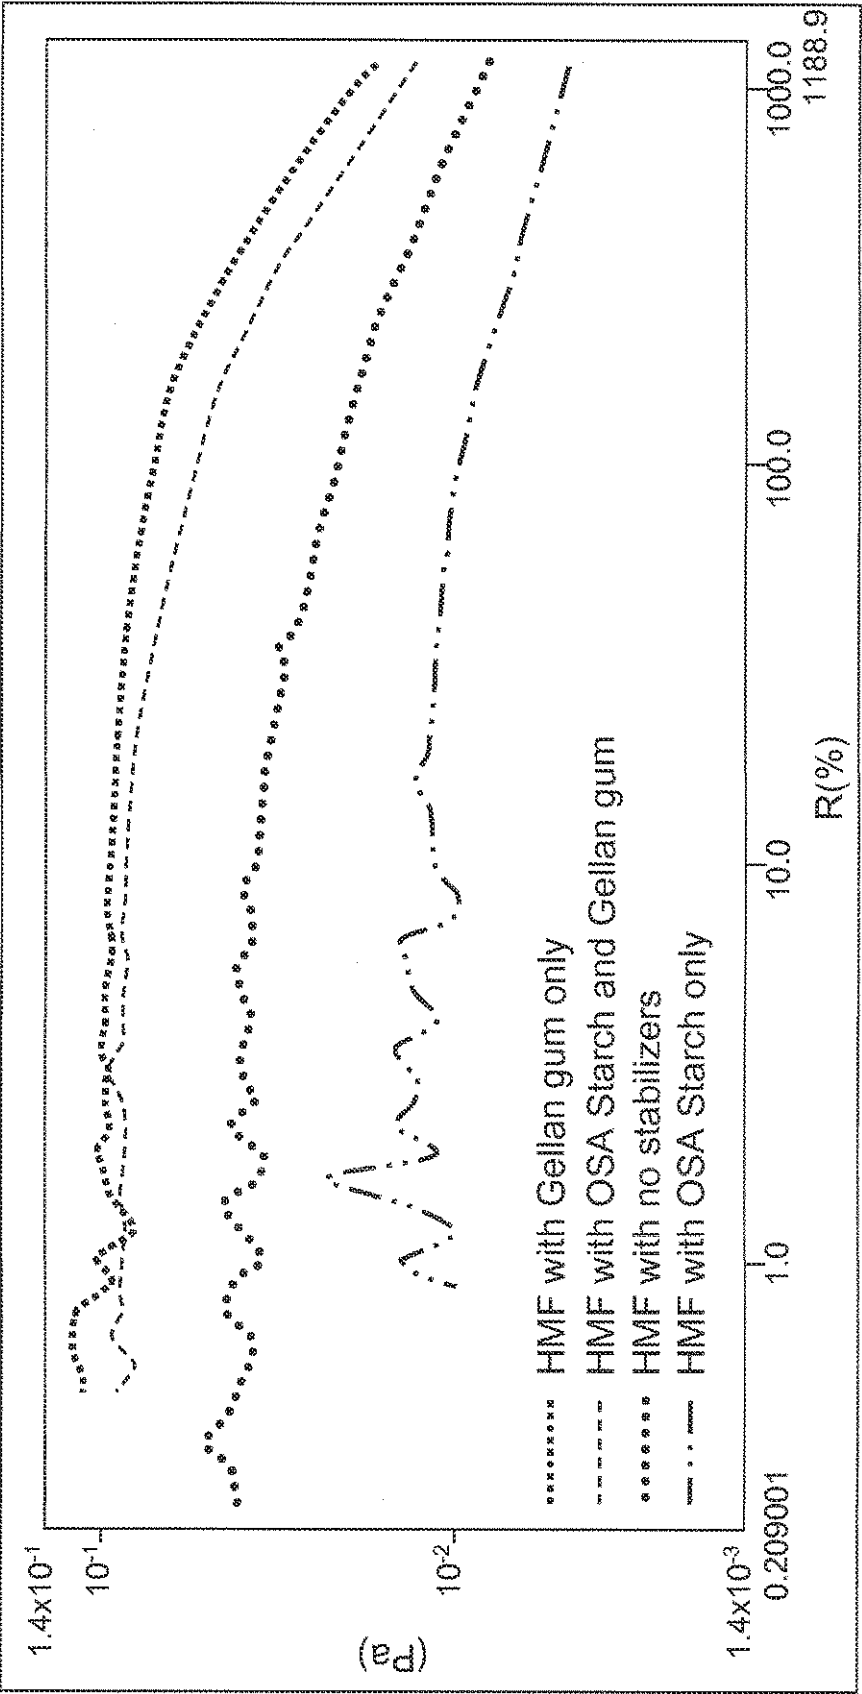

Figure 4

5/10

Elastic modula of HMF samples (in the absence of OSA starch and gellan gum, with OSA starch, with gellan gum, and with OSA starch and gellan gum combination) as a function strain.

Figure 5

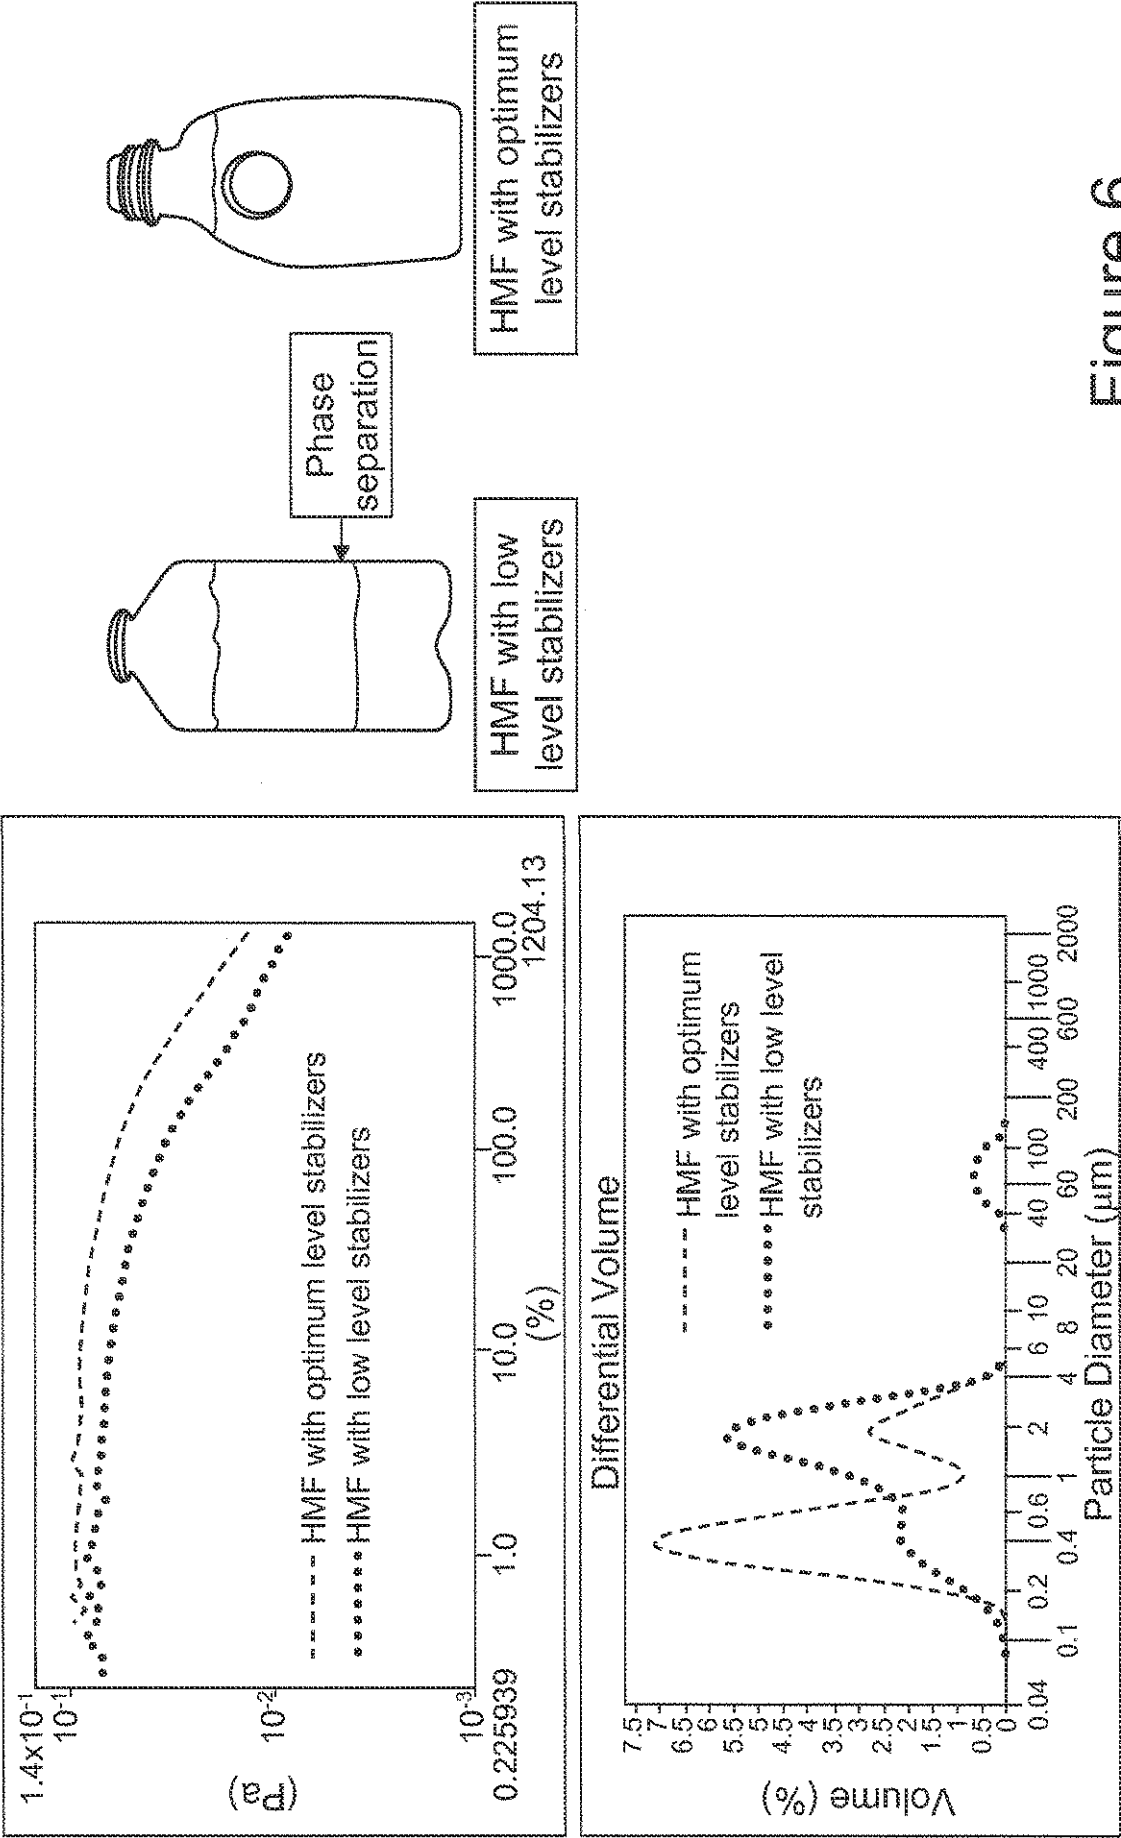

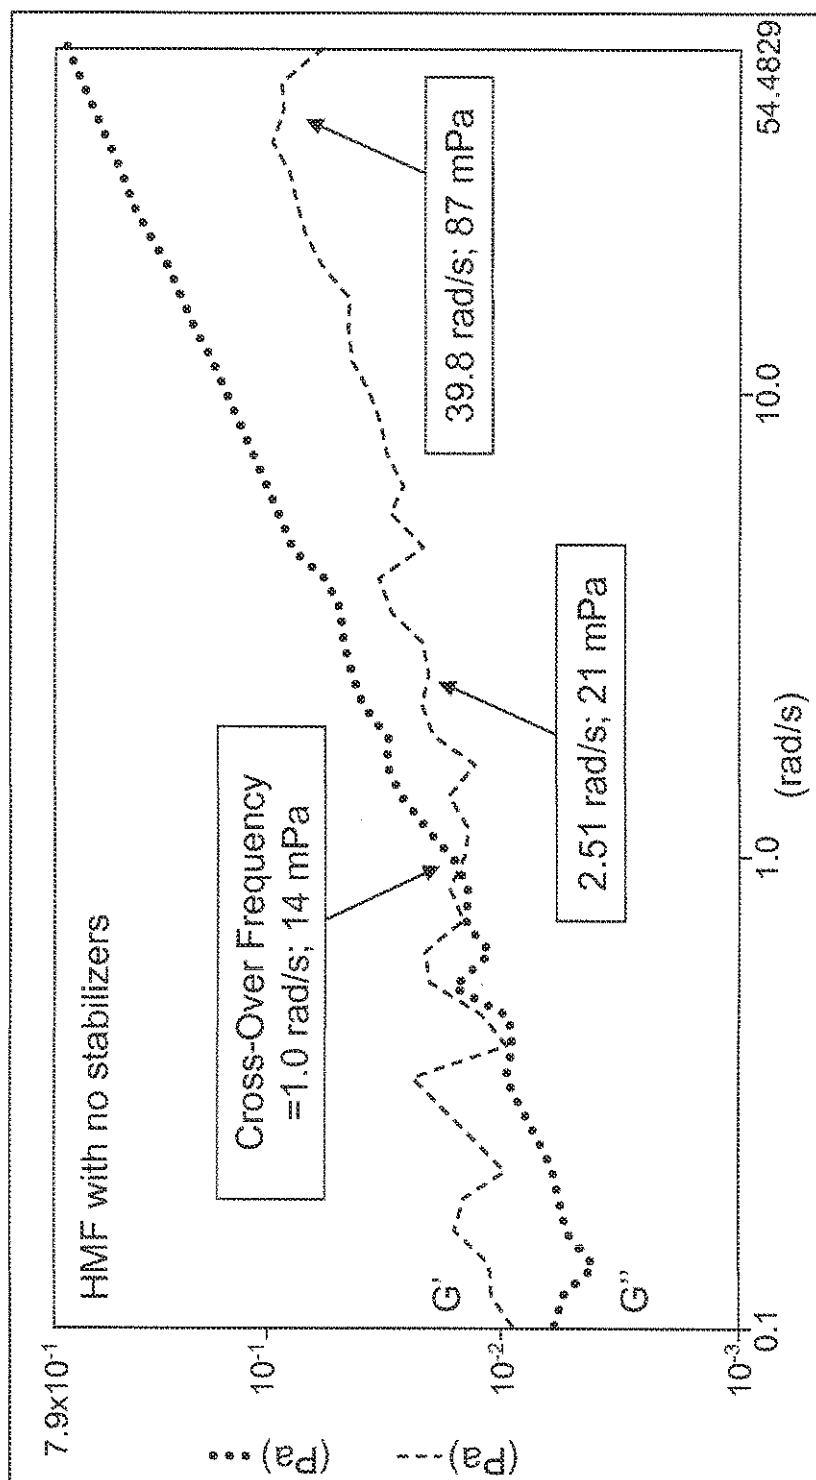

Figure 6

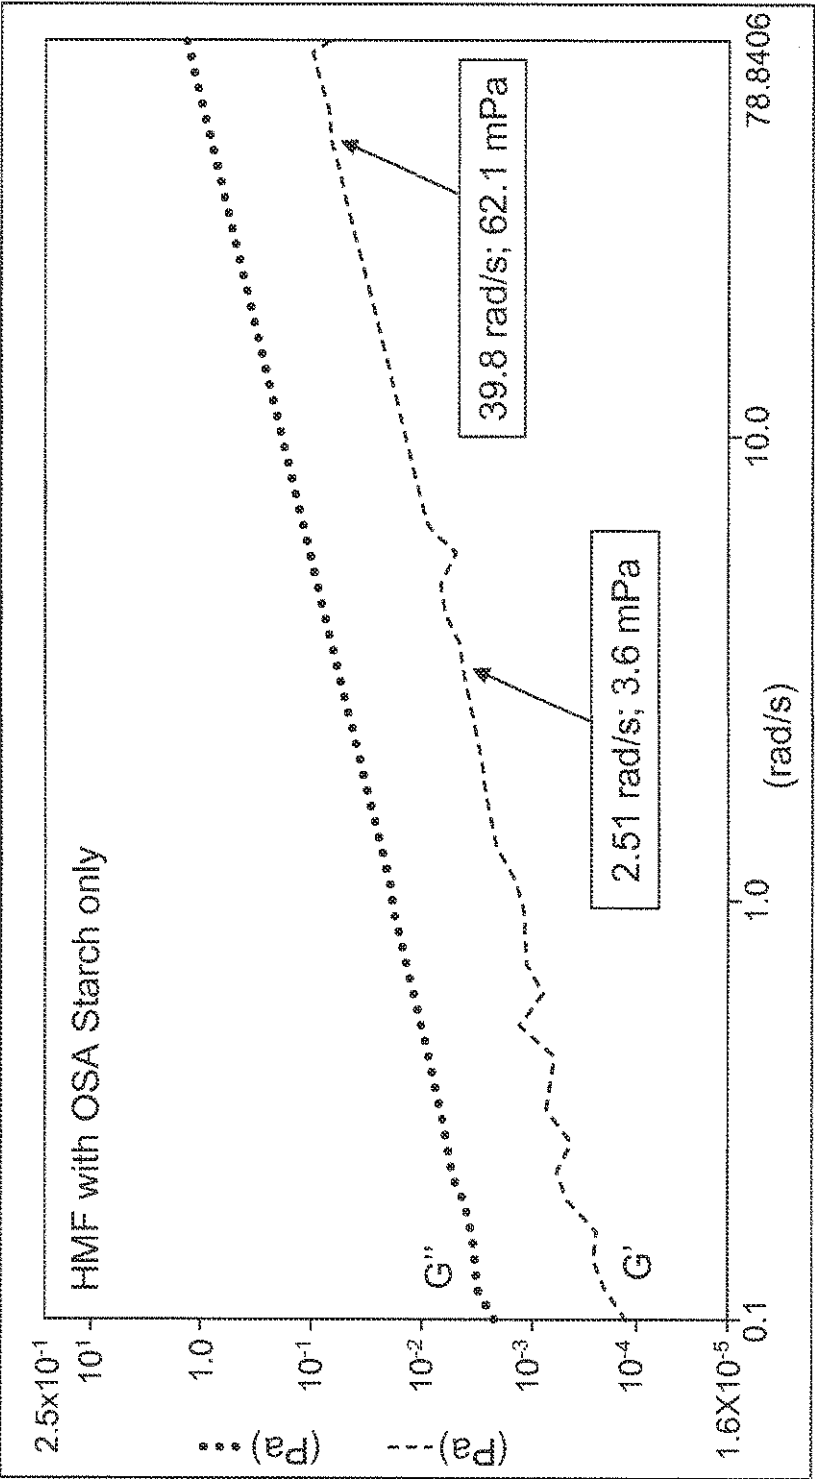

Elastic modula and particle size distributions of HMF samples with low and optimum level of stabilizers

7/10

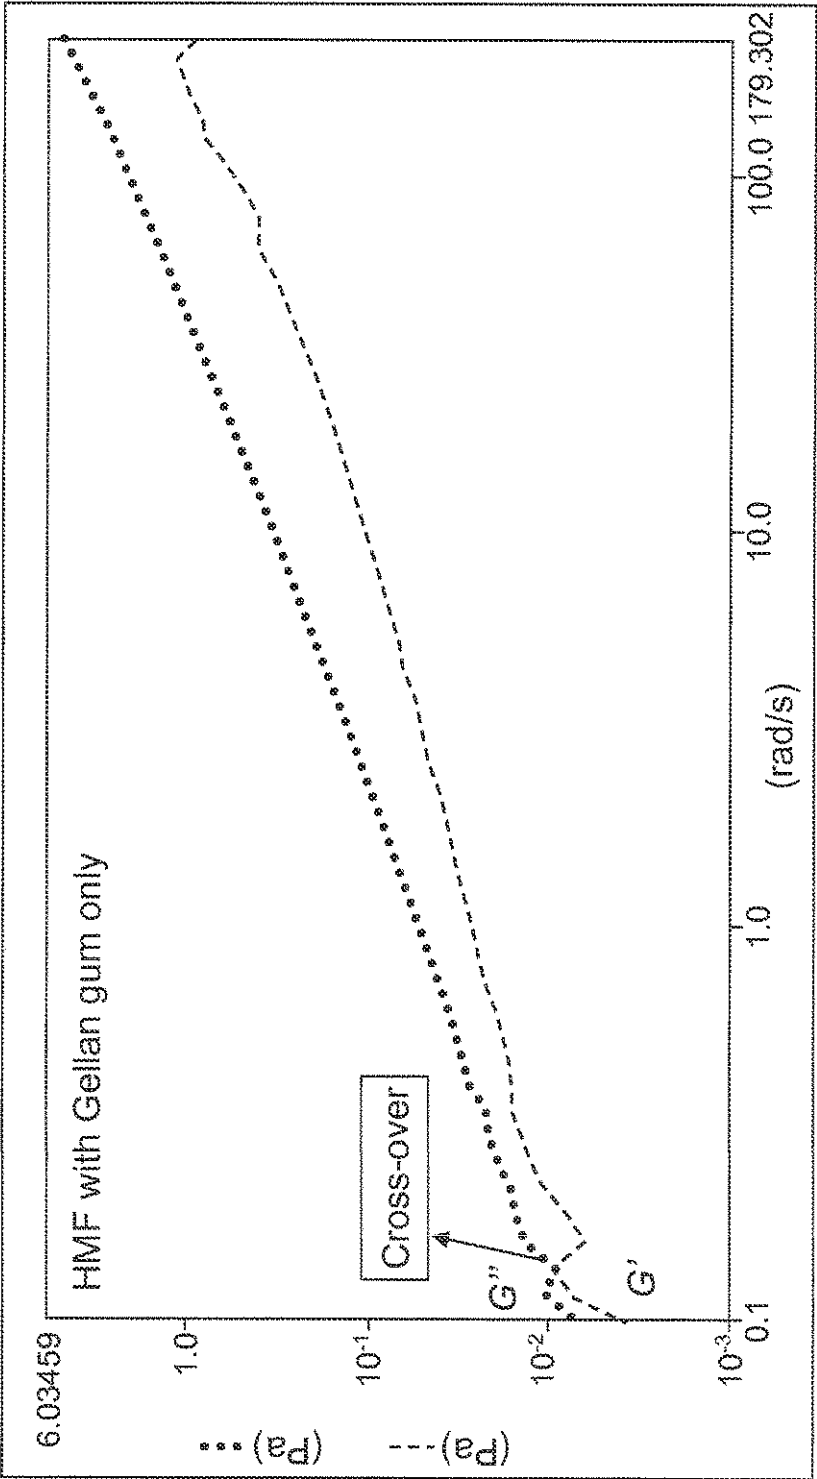

Dynamic moduli of HMF sample in the absence of OSA starch and gellan gum as a function of frequency

Figure 7

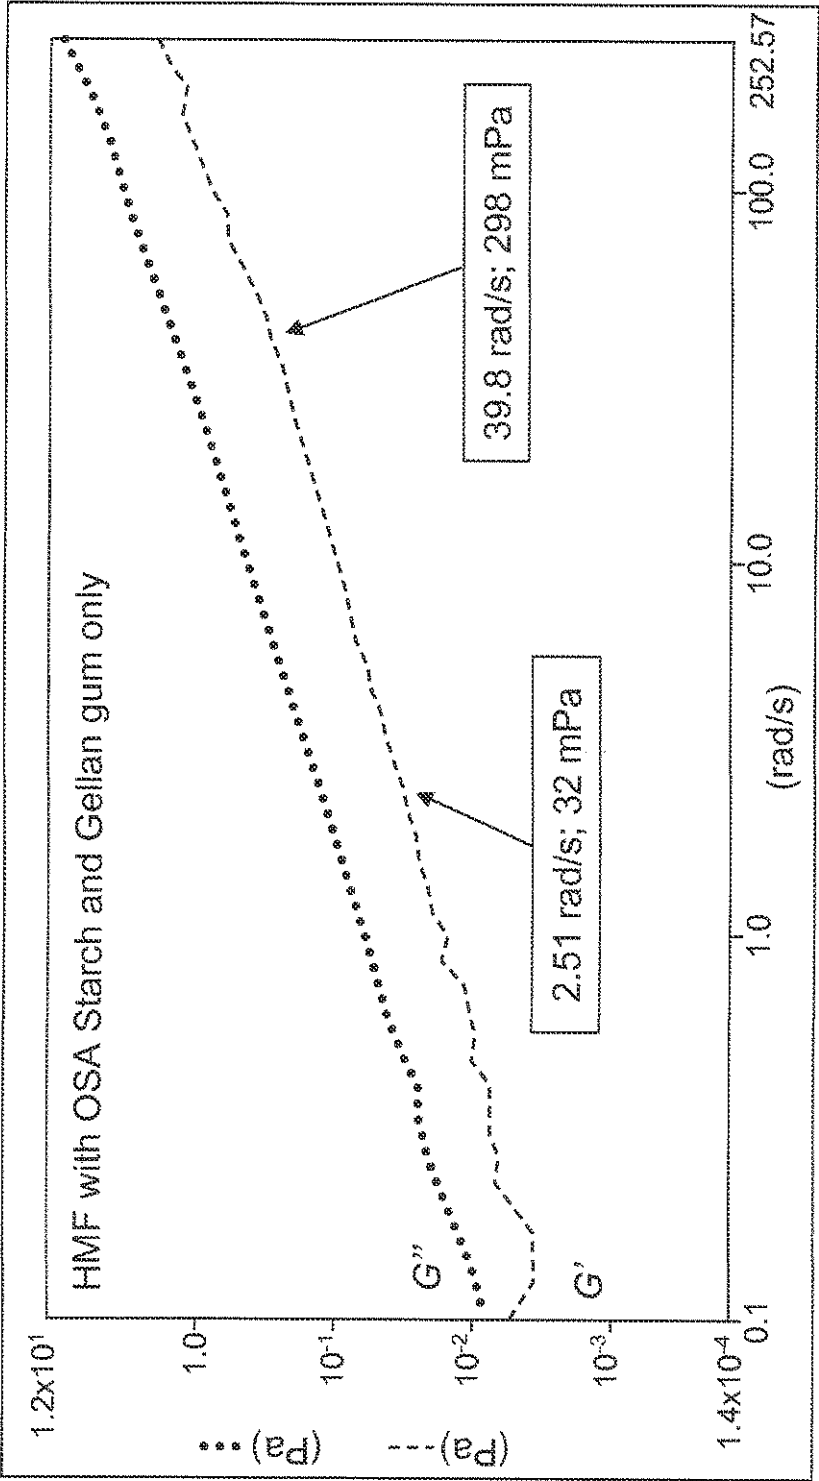

Dynamic modula of HMF sample containing OSA starch only as a function of frequency

Figure 8

Dynamic modula of HMF sample containing Gellan gum only as a function of frequency

Figure 9

Dynamic modula of HMF sample containing OSA starch and Gellan gum combination as a function of frequency
