

Communication Methods and Apparatuses

ABSTRACT

Communication methods and apparatuses are provided in the present application. A method may include: obtaining at least a part of a communication message in a communication session page of a communication application, the communication session page being used for conducting communications between an end user and at least one peer user; performing content recognition of the communication message; and configuring a to-be-sent message corresponding to a message sending control in the communication session page, so that the to-be-sent message matches a content identification result for the communication message. Using the technical solutions of the present application, the efficiency of communications can be improved.
