

FOOD AND BEVERAGE ORDER MANAGEMENT SYSTEM AND METHOD

5 A food and beverage (F&B) order management system, comprising: an order
processing module configured to obtain an order and generate a set of order fulfilling
criteria based on input provided by a database communicatively coupled with the order
processing module; and an order tracking module communicatively coupled with the
order processing module and configured to track the completion of the set of order
fulfilling criteria for successful fulfilment of the order. A method of F&B order
10 management, comprising: receiving an order from a customer; communicating the
received order to an order processing module; generating, by the order processing
module, a set of order fulfilling criteria based on input provided by a database
communicatively coupled with the order processing module; and tracking the completion
of the set of order fulfilling criteria for successful fulfilment of the order using an order
15 tracking module communicatively coupled with the order processing module.
