

ABSTRACT**METHOD OF CONCEALING A DOOR FRAME ON A DOOR OR A SERIES OF
DOORS**

5 A modified door frame (18) is installed and plastered in place of a conventional door frame (12) to achieve an aesthetically simple, neat and clean blend of wall and door. This arrangement uses any material, which does not shrink, twist or
10 wrap to allow the door, to maintain its gap tolerance without sacrificing its structural rigidity. The door frame (18) may be concealed from guest view or both the guest view and home view. For a series of doors (34), two novel mullions (36, 38), is used to separate each doors and compartment. A novel lock housing (52) is shown as part of the solution to offer a neat appearance, especially for a series
15 of doors (34). The novel lock housing (52) is surface mounted on the door from home view with a guest housing (48) and lid (46) to conceal a key hole (50) flushed from guest view.
