

ABSTRACT

Provided in the present disclosure are an interaction method and apparatus, and a device and a storage medium. The method comprises: in response to a search instruction for search information, displaying a first page, wherein the first page comprises a first area and a second area, the first area being used for displaying a search result corresponding to the search information, and the second area being used for displaying service information; and in response to a trigger operation for the second area, displaying a service page corresponding to the service information. By using the technical solution, a search result and service information are both displayed in a displayed first page after a user triggers a search instruction for search information, and after a trigger operation is input for an area where the service information is located, a service page corresponding to the service information is displayed, thus improving the convenience in search result viewing and service page switching, and improving the interaction efficiency.
