(54) Title: SYSTEM ARCHITECTURE AND METHOD FOR COMPOSING AND DIRECTING PARTICIPANT EXPERIENCES

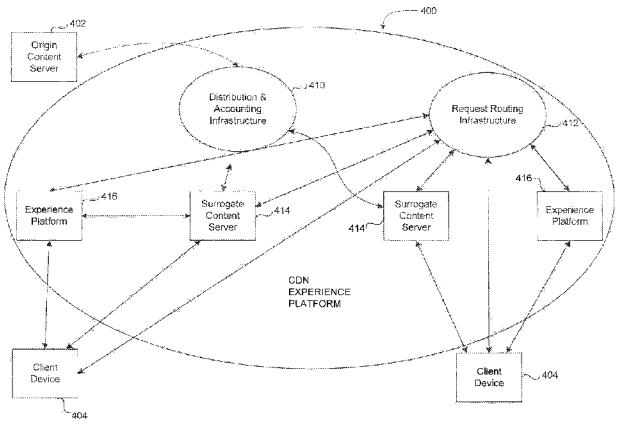

FIG. 4

(57) Abstract: The present invention contemplates a variety of improved methods and systems for providing an experience platform within a CDN, as well as sentio or experience codecs, and experience agents for supporting the experience platform. The experience platform may be provided by a service provider to enable an experience provider to compose and direct a participant experience. The service provider monetizes the experience by charging the experience provider and/or the participants for services. Alternatively, the experience platform may be provided by the CDN, either as an integrated component of the CDN, or a supplemental complimentary aspect. The participant experience can involve one or more experience participants. The experience provider can create an experience with a variety of dimensions and features. As will be appreciated, the following description provides one paradigm for understanding the multi-dimensional experience available to the participants. There are many suitable ways of describing, characterizing and implementing the experience platform contemplated herein.
