

Abstract

The present invention relates to a device (92) for cleaning
pot-shaped hollow bodies (94), wherein the device (92)
5 comprises a support wall (20) on which the hollow body (94)
can be placed; at least one passage opening (24) formed by the
support wall (20); a cleaning device (40) by which a cleaning
fluid for cleaning the cover support surface (96) can be
dispensed when the hollow body (94) is placed on the support
10 wall (20), with the cleaning device (40) having a cleaning
head (42) that projects over the passage opening (24) when the
hollow body (94) is placed on the support wall (20); and a
number of cleaning nozzles (100) through which the cleaning
fluid can be applied to the cover support surface (96). The
15 invention further relates to a method of cleaning pot-shaped
hollow bodies (94) using such a device (92).
