(54) **Title**: METHOD AND SYSTEM FOR FACILITATING A TRANSACTION

(57) **Abstract**: A computer-implemented method of processing a payment at a network node is described. The method comprises operating a processor to: identify a set of agreed purchase parameters, the agreed purchase parameters comprising data indicative of a purchase location, a purchase amount, a first device associated with a first user, and a second device associated with a second user; determine a first location of the first device; determine a second location of the second device; and responsive to determining that the first location and the second location are within a predefined distance from the purchase location, effecting a transfer of the purchase amount from a first account associated with the first user to a second account associated with the second user.
