PAYMENT METHOD, USER TERMINAL, APPARATUS, DEVICE, SYSTEM, AND MEDIUM

ABSTRACT

A method for data processing include: when payment is triggered by an e-commerce application program, calling a first SDK to obtain a first host program list from a network-wide payment platform, where the first host program list includes host program identifiers of at least part of host programs supported by the network-wide payment platform; when a target host program is determined from the first host program list by calling the first SDK, calling the target host program; and calling, by means of the target host program, a second SDK to interact with the network-wide payment platform, so that the network-wide payment platform interacts with the host program platform to complete payment by a target card, the target card being a resource card bound to the target host program.
