(54) Title: VESSEL COMPRISING A CRANE

(57) Abstract: The invention relates a vessel (4) comprising a crane (1) being connected to a deck (5) of the vessel. The crane (1) comprises - a frame (10) which is rotatable about a horizontal hinge axis (H), and - a rotation mechanism (20) connected to the frame (10) at a position away from the horizontal hinge axis (H), arranged to rotate the frame (10) about the horizontal hinge axis (H) from an upper position to a lower position and vice versa. The crane (1) further comprises - a swivel member (30), which is with a first end (31) rotatable connected to the deck (5) and which is with a second end (32) rotatable connected to the rotation mechanism (20). The swivel member (30) is rotatable between an inward position associated with the upper position of the frame (10) to an outward position associated with the lower position of the frame (10).
