ABSTRACT

The present application belongs to the technical field of music playback, and disclosed thereby are a music playing method, device, terminal and storage medium. The method comprises: playing first music by means of a music player, and playing a video in a music playing page, the first music corresponding to at least two videos; receiving a video switching operation in the music playing page, the video switching operation comprising at least one of a sliding operation, a clicking operation, a long pressing operation and a pressing operation; switching the video playing in the music playing page according to the video switching operation, and continuing to play the first music by means of the music player. The music player in the embodiments of the present application adds a new playing mode, in which the user can watch a video directly on the music playing page while listening to the music, and can switch the currently playing video. In the whole process, no additional video application program is needed, which improves the efficiency of the user watching the video and enriches the playing modes of the music player.
